## Presettable Binary Counters

### General Description

The '197 ripple counter contains divide-by-two and divide-by-eight sections which can be combined to form a modulo-16 binary counter. State changes are initiated by the falling edge of the clock. The '197 has a Master Reset ( $\overline{MR}$ ) input which overrides all other inputs and asynchronously forces all outputs LOW. A Parallel Load input ( $\overline{PL}$ ) overrides

clocked operations and asynchronously loads the data on the Parallel Data inputs ( $P_n$ ) into the flip-flops. This preset feature makes the circuit usable as a programmable counter. The circuit can also be used as a 4-bit latch, loading data from the Parallel Data inputs when  $\overline{PL}$  is LOW and storing the data when  $\overline{PL}$  is HIGH.

Order Number DM74197N  
See NS Package Number N14A

Pin Names	Description
$\overline{CP0}$	$\div 2$ Section Clock Input (Active Falling Edge)
$\overline{CP1}$	$\div 8$ Section Clock Input (Active Falling Edge)
$\overline{MR}$	Asynchronous Master Reset Input (Active LOW)
P0-P3	Parallel Data Inputs
$\overline{PL}$	Asynchronous Parallel Load Input (Active LOW)
Q0	$\div 2$ Section Output*
Q1-Q3	$\div 8$ Section Outputs

\*Q0 output is guaranteed to drive the full rated fan-out plus the  $\overline{CP1}$  input.

## Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
DM74	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
